

Clinical Data Registries and EHR Partnerships:

Automating Registry Enrollment for Practices of All Sizes

Clinical Data Registries (CDRs), powered by Premier, give providers with specialties across the continuum the ability to track and manage the improvement of care quality for their patients. Data analysis and the identification of key drivers of clinical outcomes enable clinicians to target high-impact improvement actions for their patient populations.

Benefits and Features of Premier Clinical Data Registries

- + Track and manage clinical data against registry library measures
- + Conduct comparisons against national benchmark performance data
- + Analyze patient population against measure standards of care
- + Participate in targeted educational activities to improve measure-related performance
- + Satisfy regulatory requirements with CDRs related to the MIPS program
- + Participate in Maintenance of Certification (MOC) programs that many encourage and some require registry enrollment
